

## Uniflow<sup>®</sup> Carbon Block Cartridges

The Uniflow range of Carbon Block Cartridges offer outstanding reduction of sediment, chlorine, chemicals, taste and odour, as well as cyst reduction on some models.

Carbon block cartridges are manufactured from an extruded activated carbon core for excellent filtration capacity with no channelling or bypassing. These filters flow in a radial outside-to-inside direction, providing increased dirt holding capacity and low pressure drop. A pre-filtration layer reduces sediment and extends the filter life.

Fine micron ratings can be achieved using carbon block technology and cyst reduction models are available in all sizes. A silver impregnated carbon block filter is also available for non-chlorinated water supplies.
