

Uniflow® Pleated Sediment Cartridges

The Uniflow range of Pleated Sediment Cartridges have a large filtration surface area making them ideal for applications requiring high flow rates and low pressure drop.

The filtration media is pleated to maximise dirt loading capacity and extend the time period between filter changes. Depending on the application, these cartridges can be washed and reused to extend filter life.

These cartridges effectively reduce dirt, rust, scale and sediment. Designed to suit a wide range of industry standard housings, these cartridges are ideal for both pre-filtration and final-stage filtration applications.
